

Company:	TARKETT
Product specifications	Contract Plus, Standard plus 1.5mm, Standard plus 2.0, Vylon Plus, Vylon Plus PUR
Issue date:	11. October 2024
Expiration date:	10. October 2026
Evaluation and declaration threshold:	At least 100 ppm of the final product
After-use scenario:	Tarkett proposes to take back your installation residues and your products after use, thanks to the <a href="mailto:TARKETT ReStart">TARKETT ReStart</a> ® Program.  Check Tarkett national websites for Restart program availability
EPEA Registry No:	40540.2
MHS Version:	3.0

#### **Chemicals Risk Assessment: Concern level**

This summary presents the average mass weighted distribution of material health ratings presented on next pages. Ratings address benefits and risks of chemical components of the product for humans and the living environment:

- during the phase of use of the product.
- overally while taking into account a) the last manufacturing step using raw materials leading to them in the product's composition, b) the production of raw materials in the supply chain as far as information is attainable from suppliers or from generic literature, and c) the intended management scenario after use.

The benefit and risk analysis follows a qualitative and quantitative breakdown of the product's chemical composition from the chemical composition of raw materials, a reconstruction of chemical transformation pathways and an anticipation of the chemical's behaviour during the intended after-use processing. This information is combined with physical and (eco)toxicological properties of pure chemicals obtained from governmental and non-governmental scientific organisations to derive a level of concern.

The MHS is making transparent at a point in time results of the company's activities for developing benefits of the product, including environmental and health benefits, with its purchasing and commercialization practices.

FUNCTION	CHEMICAL	CAS	CONTENT	EPEA RATING		GS-LT	
				Use phase	Overall	GS-BM <sup>(a)</sup>	REACH

THEREOF			
Content source	ntent sourced from abundant minerals 81 - 86		The fillers calcium carbonate and dolomite and the chlorine of PVC originate from abundant mineral resource.
Recycled	- Internal post-industrial source (Reprocessed own production output)	25.5%	
content	- Post-installation / Pre-use source	-	The Plus Range is produced exclusively with virgin raw materials.
	- Post-use source	-	
Biologically	- Animal	-	No chemical with a possible animal origin is identified.
renewable content	- Vegetal	1.5 - 2.2%	Epoxydized soybean oil is of vegetal origin.

EPEA's rating methodology is based on the Cradle to Cradle approach with the European Precautionary principle. It is made in relation with a quality target, an after-use scenario and on the background of the specific supply chain materials used by the article's manufacturer. The assessment of hazard/safety properties of chemicals is made at the best of our knowledge at the date of MHS<sup>™</sup> issue (see further MHS V3.0 Development Guidance). EPEA believes the data forth herein are accurate as of the date hereof. EPEA makes no warranty with respect thereto and expressly disclaims all liability for reliance thereon. Such data are offered solely for your consideration, investigation, and verification.

#### Legend:

EPEA RATINGS	REACH compliance:	GS-LT <sup>(b)</sup>	GS- BM <sup>(b)</sup>
No concern Low concern High concern – Task for material optimization Risk cannot be verified Task for knowledge development	✓: Substance is listed neither in Annex XIV nor in Annex XVII nor as SVHC and complies with European Union Regulation EC 1907/2006 applicable to this article. XVII or XIV: Substance listed in Annex XVII (Restriction) or Annex XIV (Authorisation) of REACH regulation applicable to this article SVHC: Substance of Very High Concern. Candidate for listing in Annex XIV (Authorization list) of REACH Regulation at a concentration above 0.1%  -: Not applicable due to missing CAS	LT-1: Chemical is found on an authoritative list of the most-toxic chemicals LT-P1: Chemical may be a serious hazard, but the confidence level is lower LT-UNK: Unknown (no data on List Translator Lists)	BM1: Avoid: Chemical of High Concern BM2: Use but search for Safer Substitutes BM3: Use but still opportunity for improvement BM4: Prefer: Safer Chemical BMU: "Unspecified"; insufficient data N.I. (No GS rating): Chemical is not listed in the source of GS and GS-LT ratings

- (a) GreenScreen List Translator Score and GreenScreen Benchmark Score according to <u>3E Exchange</u>
- (b) Component originating either from the natural resource or from virgin or recycled raw material without functionality in the product's context.
- (c) Proprietaries can be due to the decision of the producer or result from non-communication of the full composition of used raw materials either to producer, or to EPEA, or both.
- (d) Please refer to EPEA's position on PVC and chlorine management
